

# Exploring moral behavior of thinking machines

Abhi Agarwal

Did morality evolve? Frans de Waal centralizes this idea and furthers it by asking how morality evolved. Opposing de Wall on the idea are a small group of biologists. They argue that morality is a construct or an idea that is unique to human beings, and the purpose of morality is to minimize our animalistic instincts. de Wall gives accounts for the idea that morality has evolved continuously and has evolved from Chimpanzees, Bonobos, and Great Apes.
